

AI Insights — Proposal

CoopCart · AI-powered analysis of sales & operations for the manager dashboard

Prepared for the board · Abeyrathna Farms

✓ Phase 1 is already built & tested — it activates with a single API key

1. What we propose

Add an “**AI Insights**” panel to the manager’s Reports dashboard. At the click of a button it turns the sales figures we already track into a short, plain-English analysis — the top-selling egg grades, the cash-vs-bank payment mix, revenue trends, and a few recommended actions (for example, which grade to keep stocked, or payments waiting to be cleared). It reads like a quick note from a business analyst, generated on demand.

2. Why it fits CoopCart now

The system already does the two hard parts: it **computes rich report data** (revenue, orders, trays, per-grade and per-payment-method breakdowns) and it **already uses AI** for the customer support chatbot. This feature simply connects the two — which is why it was low-effort to build.

3. How it works

4. Built-in safeguards

Concern	How it is handled
Privacy	Only aggregated totals are sent to the AI — never customer names, contacts, or individual orders.
Security	Staff-only and server-side. The AI key never reaches the browser (verified: the endpoint refuses non-staff requests).
Reliability	If the AI is ever unavailable, a built-in rule-based summary is shown instead — the panel always works.
Cost	A fraction of a cent per analysis; the data sent is tiny. No new subscription — it reuses the existing AI account.

5. Status & what’s needed

Phase 1 is complete. The panel is implemented, the production build passes, and the staff-only security is verified. To switch on the AI-written version, we set one API key on the server; until then it shows the rule-based summary — so **it works today either way**.

6. Roadmap

Phase	Capability	Status
1	AI insights & recommendations on the Reports dashboard	Built
2	Demand forecasting per grade · low-stock reorder suggestions	Proposed
3	Natural-language data questions · payment-slip anomaly flags	Proposed

In one line: a low-cost, privacy-safe upgrade that turns the numbers CoopCart already collects into clear, actionable advice for the manager — already built and ready to enable.
